

BI Reporting Analyst

POSITION SUMMARY

The BI Reporting Analyst will be responsible for understanding business data, performing analysis and report writing utilizing key sets of information from the SAP BW system and applications. They will work with the business users in understanding business reporting and analysis needs to gather and document requirements to support the delivery of the needed back end structures and data, as well as plan and implement the proper front end reporting and presentation solutions.

The BI Reporting Analyst will provide expertise in the visualization and presentation of enterprise data to satisfy the analytical, decision support, and operational reporting needs of the business community. They will be responsible to maintain, update and enhance existing reports, as well as develop, test, and deploy new reporting solutions to the production environment. They will also participate in the planning and implementation of reporting strategies and go forward reporting solutions with the broader Business Intelligence Team.

The ideal candidate will possess a comprehensive knowledge of the frontend reporting tools used within the SAP BI suite (including SAP BW, EP, Business Objects, and MS Excel). This individual will be required to apply proven communication, analytical and problem solving abilities to help maximize the benefit of the SAP BW system, data, and Business Intelligence applications in the Medicis environment.

GENERAL EXPERIENCE NEEDED

The following general experience is required of the resource needed to fill the role of BI Reporting Analyst:

- Bachelors Degree in Computer Science, Information Systems, MIS or related discipline
